Engaging Communities in Delinquency Prevention: The Communities That Care System

Dalene A. Dutton, M.S.

Communities That Care Specialist
Social Development Research Group (SDRG)
School of Social Work
University of Washington
www.sdrg.org
www.communitiesthatcare.net

Objectives

- Why should we care about prevention?
- What is the research base for prevention science?
- Why is prevention infrastructure important?
- How does Communities that Care build prevention infrastructure and what is its impact on delinquency, violence and substance use?

2

Shift in Causes of Mortality

- Due to the success of concerted worldwide efforts to address infectious disease and investments in child health, more children are surviving into adolescence, and there has been a shift in the leading causes of mortality from infectious to non-communicable diseases and conditions
- Behavioral health problems are implicated in this shift

Leading Causes of Mortality 15-24 Year Olds (2011, U.S.)

	Total deaths (per 100,000)
1 Motor Vehicle Crashes	15.9
2 Accidents	11.5
3 Intentional self harm (suicide)	10.7
4 Assault (homicide)	10.3
5 Malignant neoplasms	3.7
6 Diseases of heart	2.2
7 Congenital malformations, deformations and abnormalities	1.0
8 Influenza and pneumonia	0.5
9 Coronary diseases	0.4
10 Pregnancy, childbirth and the puerperium	0.4

**48.8/100,000
or 72% of all
deaths**

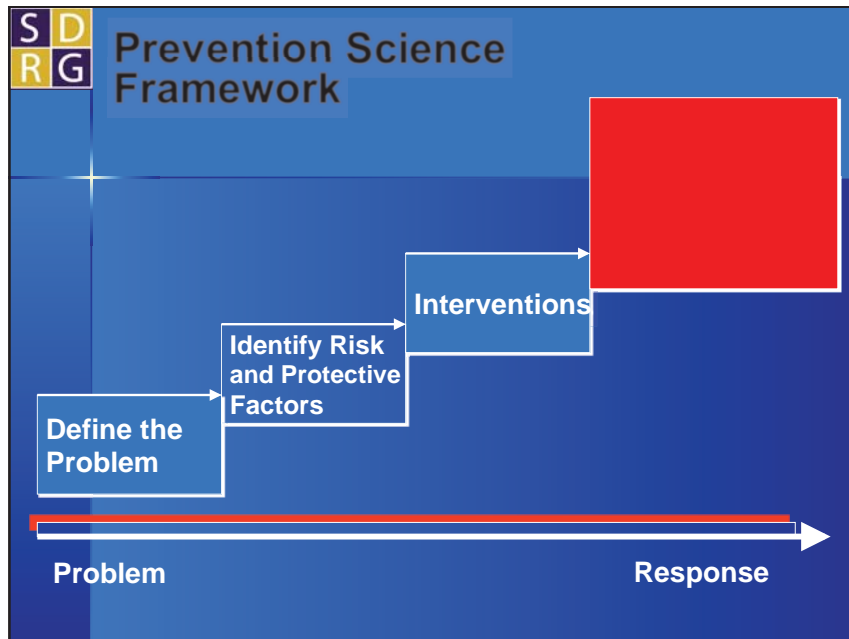

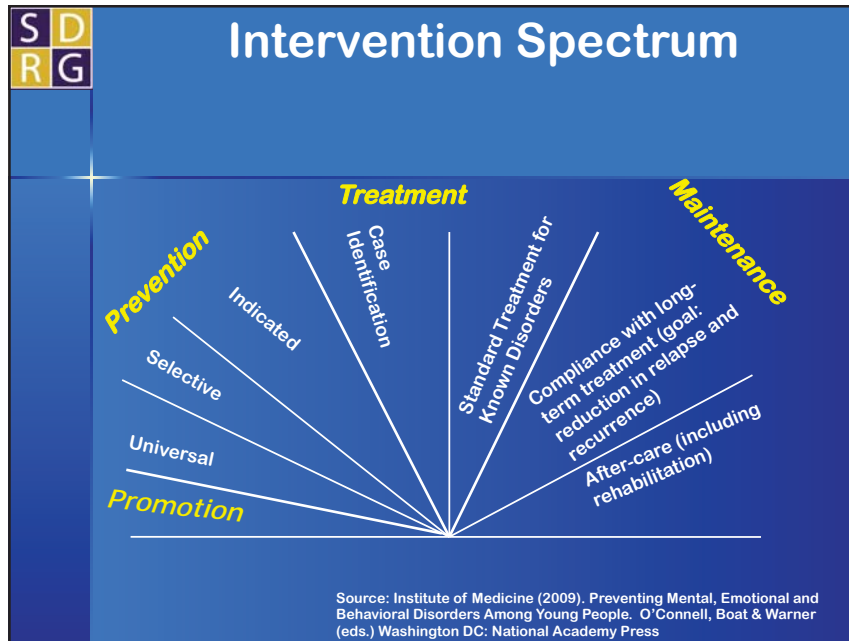

Prevention is Critical for Health and Well-being

- Behavioral health problems cause harm in adolescence
- Behavioral health problems established in adolescence cause harm into adulthood
- Preventing these behavioral health problems during adolescence can reduce mortality and morbidity over the life course

Prevention is Cost Beneficial

- According to a recent Justice Policy Institute report, the average cost per day (in the U.S.) to confine youth is >\$400.
- Cost to society for youth problem behaviors that lead to contact with the justice system (property damage, substance abuse, theft, etc.) is large.

*Preventing Mental, Emotional and Behavioral
Disorders Among Young People:
Progress and Possibilities*

Preventing Mental, Emotional,
and Behavioral Disorders
Among Young People

Progress and Possibilities

A summary of the
progress of
prevention science

THE NATIONAL ACADEMIES
Advisers to the Nation on Science, Engineering, and Medicine

40 Years of Prevention Science Research Advances

Etiology/Epidemiology of Problem Behaviors

- Identify risk and protective factors that predict behavioral health problems and describe their distribution in populations and communities.

Efficacy Trials

- Design and test preventive interventions to interrupt causal processes that lead to youth problems.

Prevention Services Research

- Understand how to build effective infrastructure to use prevention science to achieve community impact.

(Catalano et al., 2012; O'Connell, Boat & Warner, 2009)

What We Now Know About Risk and Protective Factors

- Both an individual's level of risk and level of protection make a difference
- Common risk and protective factors predict diverse problems and academic outcomes
- Risk and protective factors show much consistency in effects across diverse groups
- Different neighborhoods have different levels of risk and protection

Science Guided Prevention

Prevention interventions should
target malleable risk and
protective factors

(Coie et al., 1994; Mrazek and Haggerty, 1984;
Woolf, 2008; O'Connell, Boat & Warner, 2009)

THE LANCET

www.thelancet.com

Adolescent Health

An Executive Summary for The Lancet Series

"Failure to invest in the health of the largest generation of adolescents in the world's history jeopardises earlier investments in maternal and child health, erodes future quality and length of life, and escalates suffering, inequality, and social instability."

Despite this Progress...

Prevention approaches that do not work or have not been evaluated are more widely used than those shown to be efficacious.

(Ringwalt, Vincus et al., 2009)

21

The Challenge

- How can we build prevention infrastructure to increase use of tested and effective prevention policies and programs **with fidelity and impact at scale...**

while recognizing that communities are different from one another and need to decide locally what policies and programs they use?

22

Building Prevention Infrastructure to Use the Prevention Science Research Base

Build **capacity** of local coalitions to reduce common risk factors for multiple negative outcomes through:

- Assessing and prioritizing epidemiological levels of risk, protection and problems
- Choosing proven programs and policies that match local priorities
- Implementing chosen programs with fidelity to those targeted

Communities That Care: A Tested and Effective System for Building Community Prevention Infrastructure

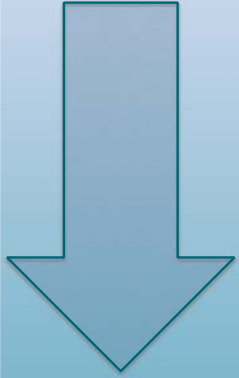

CTC is a *proven* method to **build community commitment and capacity** to prevent underage drinking, tobacco use, and delinquent behavior including violence.

- Idea developed in 1988, 15 years of implementation and improvement through community input prior to randomized trial
- CTC has been tested in a randomized controlled trial involving 12 pairs of matched communities across 7 states from Maine to Washington.
- CTC's effects have been independently replicated in a statewide test in Pennsylvania.

24

Communities That Care = Powerful Impact

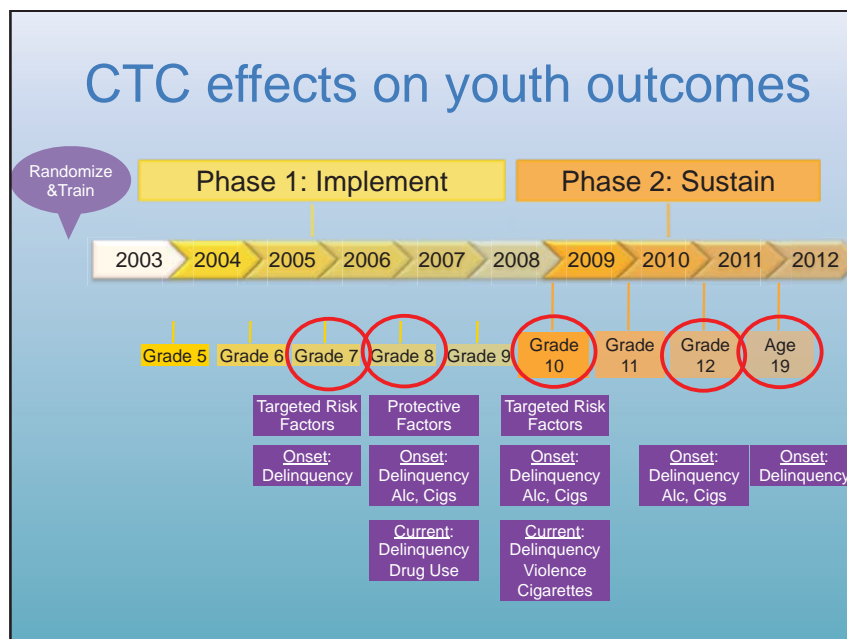

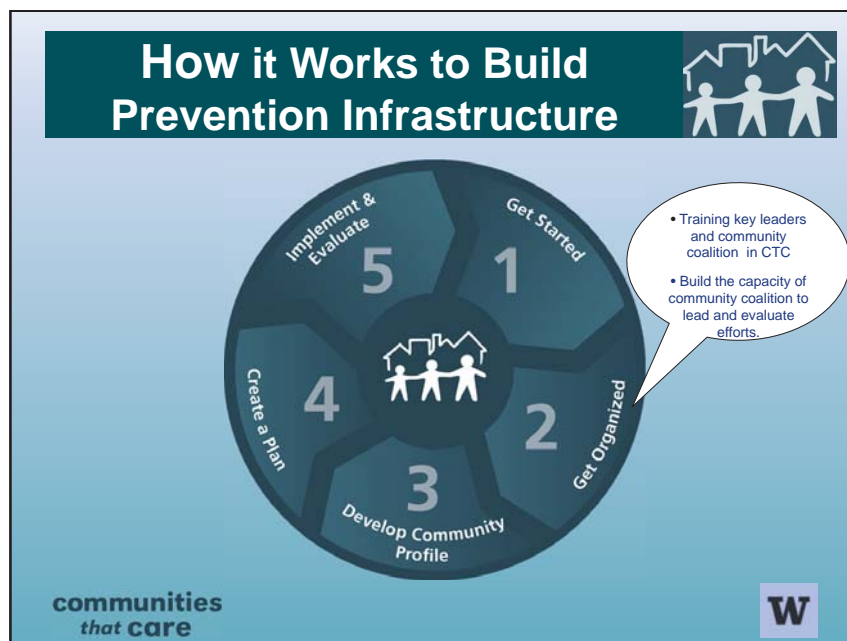

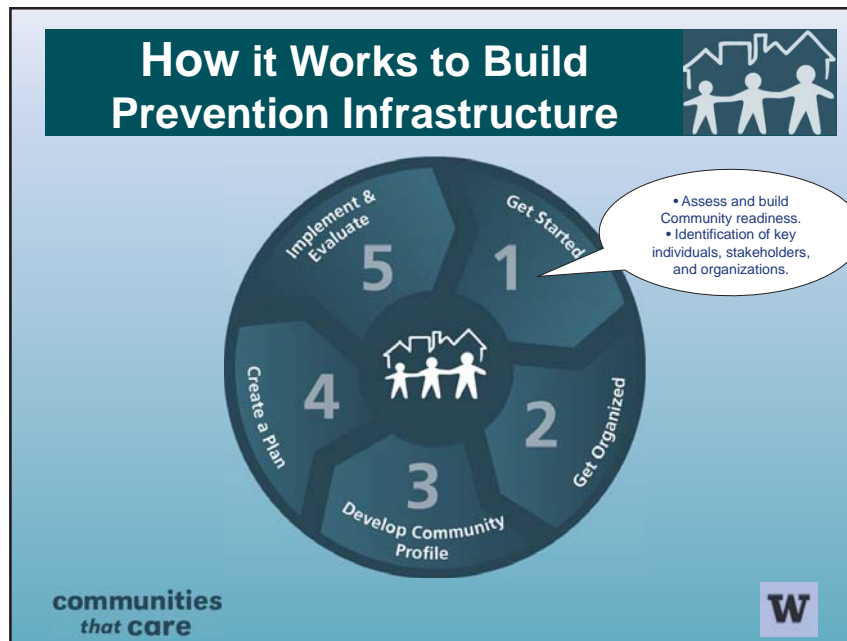

- 33% tobacco
- 32% alcohol
- 25% delinquent behavior

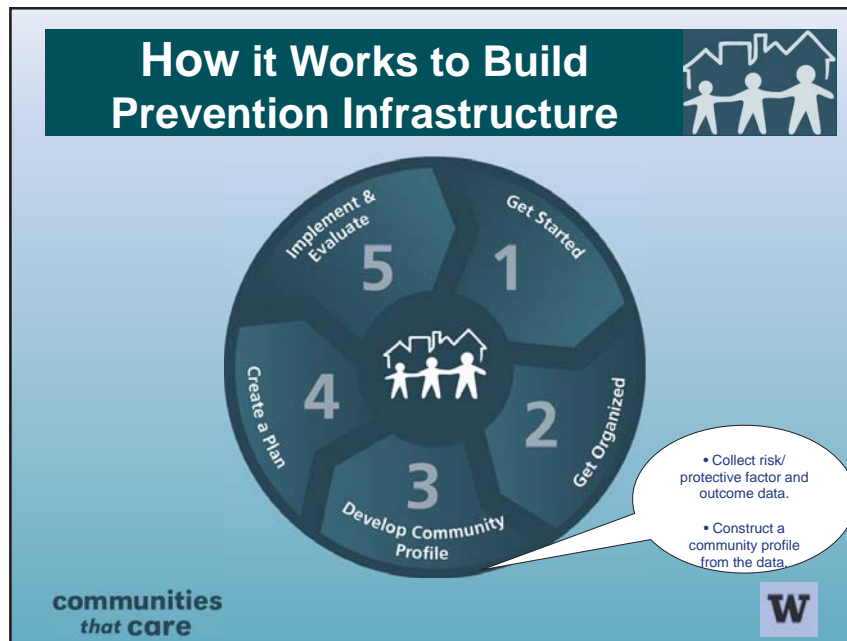

A large trial of Communities That Care produced reductions in drug use and delinquency.

S D
R G

CTC Youth Survey

- Assesses young peoples' experiences and perspectives.
- Provides valid and reliable measures of risk and protective factors across state, gender, age and racial/ethnic groups. (Arthur et al., 2002; Glaser et al., 2005)
- Identifies levels of risk and protective factors and substance use, crime, violence and depression for state, district, city, school, or neighborhood.
- Provides a foundation for selection of appropriate tested, effective actions.
- Monitors effects of chosen actions by repeating surveys every two years.

The CTC Youth Survey is in the public domain

CTC Prevention Infrastructure Supports and Sustains Effective Prevention with Fidelity and Impact at Scale

- Builds capacity and provides tools to assess and prioritize local risk, protection and youth outcomes, and match priorities to evidence based programs
- Builds capacity and provides tools to insure program fidelity and engagement of target population
- Affects risk, protection, substance use, delinquency and violence community wide and is cost beneficial
- Creates citizen advocates for prevention science
